Art Unit: 3775

DETAILED ACTION

Claim Objections

1. Claims 5-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

- 1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 2, and 17-21 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Pub. No. 2003/0078579 to Ferree.

As to **Claim 1**, *Ferree* discloses a fissure repair device (15), the device including a first portion (110 and 110'), a second portion (120 and 120') and a variable link (114) between the first portion and second portion, in which the first and second portions are portions of a common element ([0041 and 0042] describe integral device), one of the first or second portions being formed by one or both end portions of the element [0042] and (Fig. 4 shows 120 and 120' at end portion of element), the first portion being linked to the second portion by one or more link portions (link 114), the one or more link portions being portions of the common element [0042].

Application/Control Number: 10/594,158

Art Unit: 3775

As to Claim 2, Ferree discloses a fissure repair device in which the first portion is formed by the intermediate portion of the element (See Fig. 2) and [0041] and the second portion is formed by the two end portions of the element (Fig. 4 and [0042]).

As to Claim 17, Ferree discloses a fissure repair device (15) including a first portion (110 and 110'), a second portion (120 and 120') and a variable link (114) between the first portion and second portion, in which the first and second portions are portions of a common element ([0041 and 0042] describe integral device), the first portion being linked to the second portion by one or more link portions (114), the one or more link portions being portions of the common element [0042], the second portion being formed by both end portions of the element [0042] and (Fig. 4 shows 120 and 120' at end portion of element).

As to Claim 18, Ferree discloses a fissure repair device in which the first portion (110 and 110') is in the forming of a first second portion (120) forming part, first link portion (114), first portion (110 and 110'), second link portion (108) and second portion forming part (120'), with this being the sequence from one end to the other of the element.

As to Claim 19, Ferree discloses a fissure repair device in which one of the second portion forming parts (120) and/or the link portion (140) connected to it, is provided with a reduced height part and/or neck part (neck part in [0042]) and the other of the second portion forming parts (120') and/or the link portion connected to it, is provided with an aperture (aperture through 108 surrounding 114).

As to **Claim 20**, *Ferree* discloses a fissure repair device in which the second portion forming part provided with the reduced height part and/or neck part is passed through the hole in the other second portion forming part [0042].

As to Claim 21, Ferree discloses a method of repairing a fissure in a material, the method including the steps of: providing a fissure repair device [0039], the device including a first portion (110 and 110'), a second portion (120 and 120') and a variable link (114); deploying the first portion of the device inside the fissure [0044]; deploying the second portion of the device outside the fissure (Fig. 7D); connecting the first portion to the second portion at one or more locations using the variable link [0042, 0044], the variable link passing through the material (See Fig. 2 and Fig. 7D).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatenable over U.S. Patent Pub. No. 2003/0078579 to Ferree in view of U.S. Patent No. 7,341,601 to Eisermann et al.

As to Claims 3 and 4, Ferree discloses the claimed invention except wherein the first portion includes a first part, second part and third part, the first portion being provided with one or more holes in the second part thereof, the first portion being provided in the first and third parts thereof with one or more further sets of holes; and

the first part and/or third part are folded against the second part, the holes in the first and third parts align with holes in the second part.

Eisermann discloses a fissure repair device (30 in Fig. 6) wherein the first portion being provided with one or more holes in the second part thereof (holes within mesh of 30 and 35a and b), the first portion being provided in the first and third parts thereof with one or more further sets of holes (holes provide through portions of implant in Fig. 6); and the first part and/or third part are folded against the second part, the holes in the first and third parts align with holes in the second part (folding over in 30 in Fig. 6 would align 35a, b, and holes within mesh) in order to promotes tissue growth and repair of the annulus and stabilize the implant (Col. 2, lines 36-50).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the fissure repair device of *Ferree* with the holes of *Eisermann* and bone plate holder of *Grinberg* in order to promotes tissue growth and repair of the annulus and stabilize the implant.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CHRISTOPHER BECCIA whose telephone number is (571)270-7391. The examiner can normally be reached on M-F 7:30am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Barrett can be reached on 571-272-4746. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
